Behavioral economics is the study of economic decisions made by humans in a rational, intelligent, efficient way. An Introduction to Behavioral Economics is a textbook for a standard first year undergraduate economics course. Behavioral economics seeks to explain economic choices and behavior with reference to

factors such as psychology, sociology, cognitive biases, and bounded rationality. The key idea behind behavioral economics is that, when attempting to explain why people behave the way they do, we should try to account for the cognitive and social-psychological factors that people bring to economic decisions.
