Immunotherapy has received increased interest over recent years. Dendritic cells (DC) are potent antigen presenting cells that play a pivotal role in the initiation of immune responses. MR techniques have been developed that allow non-invasive visualization of DC biology. MR is a versatile technique allowing visualization of key DC functions, such as migration, morphology and antigen presentation in vivo. The aim of this review is to summarize the current knowledge of MR-based imaging of DC biology in experimental and clinical settings. 2d92ce491b
