The coming year will present difficult challenges for any company, organization or person that relies on cloud computing. Whether it is a small web based business seeking to improve efficiency or a huge IT enterprise seeking to protect a large corporate system, the business benefits of cloud computing are too many to ignore. Organizations can opt for cloud computing solutions that are becoming more robust as they gain in popularity. Some cloud computing solutions can be used immediately while others require a certain amount of time before they can be fully implemented. The business benefits of these cloud

computing solutions will vary according to the benefits they offer. Whether it is a personal home server or a cloud computing system for an enterprise, cloud computing is here to stay. In fact, the CIO of Yahoo reported that his organization spent about \$20 million on cloud computing in 2012 alone. The benefits of cloud computing include better communication, increased efficiency, cost savings and better products for customers. Although cloud computing sounds exciting, the technology is new and has not been around for long. Some research on cloud computing dates back to 2009. According to Cloud Computing 2011, the cloud has changed the way information is managed in the past five years. Nevertheless, cloud computing is not for the faint of heart. Even with the growth of cloud computing, the technology is still a bit risky. According to an article on Wired, the government is concerned that the U.S. military is using cloud computing for non-military purposes. Aside from security and government concerns, cloud computing is still in its infancy. In most cases, organizations have not experienced cloud computing first-hand. Instead, they have used cloud

computing when they find solutions that are not feasible on-premises. Some companies have moved their data storage and processing capacity to the cloud. Instead of investing in a supercomputer, a company might purchase cloud computing to gain access to more computing capacity. When using cloud computing, IT employees can access a variety of computing resources through the Internet. Using cloud computing,
