

Auxiliary\_controls\_v2\_for\_live\_mixing\_and\_mastering\_on\_Mac\_OSX. Sidewalk Care is a program of the Delaware River Watershed Council in partnership with the Delaware River Waterfront Corporation (DRWC), the City of Philadelphia, Philadelphia Water, the Philadelphia School District and the Parks and Recreation Department. As part of a sidewalk repair project, the sidewalk along the Riverfront Trail has been removed to allow for construction of a small pond. The construction crew that was working on the sidewalk the day before I was there ran a conduit under the sidewalk. This conduit drains to a site behind the Philadelphia Art Museum. They had been digging for weeks and were just laying their last pipe. Near the end of this conduit is a hole for the retaining wall. The conduit had just been finished and was wrapped with plastic and covered with earth. I didn't want to disturb this but it is one of the first things you see after you go under the sidewalk. The hole they had dug was large enough to accommodate this conduit which is three feet long and two inches in diameter. This conduit will now drain into the new pond which is just a few hundred feet away. Although I know this pond will be a bit murky in the early spring, the sight of this conduit under the sidewalk was a reminder of how important it is to clean the city's storm sewers.Q: Error when checking input: expected dense\_2\_input to have 2 dimensions, but got array with shape (1080, 6) I am trying to use model.fit\_generator for my model but I am getting the error: "Error when checking input: expected dense\_2\_input to have 2 dimensions, but got array with shape (1080, 6)" I am trying to predict the SATE, which has six features. My code is: #Load files data\_loaded = pd.read\_csv('file.csv') #Create empty list data\_y = [] data\_x = [] #Create model model = keras.Sequential() model.add(Dense(3, input\_dim=6, activation='relu')) model.add(Dense(3, activation='relu')) model.add(Dense(1, activation='sigmoid'))
