KEYMACRO is the keylogger that is built into the BIOS of all computers, which lets you create a new keyboard shortcut to execute a command whenever a specific key is pressed on the keyboard. Easy configuration and use The program is easy to use, as it can be configured by entering a few details, which means that not all of the great things that it offers can be utilized. The most important thing to note is that the program doesn't need to be run manually, which is a huge plus, because you don't have to manually input the commands each time you want to execute them. All you need to do is select the shortcut to assign and configure the parameters that you want. You can choose whether the command has to be executed when the Windows starts, after the computer is idle, or whenever a specific key is pressed on the keyboard. It is also possible to set the keyboard layout to the US English, Canadian English or Simplified Chinese. Then, it is possible to either assign a keyboard shortcut to it, or keep it as a regular command that you can execute. The latter option is actually quite useful, because you don't have to enter the details manually each time you want to use it. Finally, you can choose whether or not you want to filter the commands that are executed, so that you won't see any unnecessary keystrokes, like a sleep, reboot, shut down or hibernate. Bottom line KEYMACRO is the perfect tool for helping to avoid all those unwanted keystrokes that are not needed, and a piece of software that won't let you down. The program isn't a huge resource hog, which is also a nice thing, since you can't put it on a server, a tablet or anything like that. KEYMACRO Description: KEYMACRO is a program that makes it possible for you to record screen captures and also record audio. Quick recording and saving One of the great things about this piece of software is the fact that it allows you to record everything on your screen, while capturing the sounds as well. To start recording, you have to drag the screen capture button and then click and hold it on the screen. When you are done with recording, it is possible to save it in one of three formats, QuickTime, AVI and JPG, which means that you can use the recording in any type of application.
