From the menu select acad.exe (recommended to start from the login program) or acadui.exe (from the installer) Opening a drawing file When you open the program in order to draw it will appear a message: "file is not compatible with the version of Autocad you are running". The program is in compatibility mode with the new version installed According to Autodesk: Autocad - 20.12 or later Acad.exe or acadui.exe You will have to activate the program to use it. To do this go

to "file" > "Account". Click on the drop down arrow next to "activate" and then select "Acad.exe (or acadui.exe)". Click the Activate button. You will have to re-install Autodesk AutoCAD before you can use it (go to "file" > "Activate"). Autodesk Technical Support then asked us to search the market to see if we could find a software that could fill this gap, "we did not find any alternative at this time". Autodesk stated that Autocad 20.12 was the last version of Autocad to have this limitation. A similar solution was proposed by iRay

Software as its product is cross-platform. Autodesk AutoCAD 2012 release Autodesk announced on July 18, 2011, that AutoCAD 2012 would have full support for creating ARX files. Autodesk stated on its AutoCAD page: "AutoCAD 2012 is the first release of AutoCAD to support the AutoLISP programming language. Using the AutoLISP language, AutoCAD developers can write custom AutoCAD programming routines called AutoLISP commands." Autodesk AutoCAD 2012 had full support for creating ARX (Arc and Trace) files.

Autodesk stated: "with AutoCAD 2012 you can now directly create both 4- and 6-point trace and arc data types from the ARX command dialog. You can also export to the native ARC and trace commands directly from the ARX dialog". The second Autodesk release of AutoCAD, which was released in October, 2012, was on the Autodesk web page: "ARC The ARC command in AutoCAD 2012 provides the ability to trace the shape of a profile or object, using both 4 and 6-point tracing

Get best-in-class end-user customization of your annotations. Make design choices by using interactive graphics, which can be created with the Draw command or directly imported into your drawings. Provide the best possible design environment for your users, including ergonomics, text and UI design. Enhancement to the text insertion tool (video: 4:02 min.): Text insertion tools - like the Standard Text tool - have been enhanced. It now offers the

following features: Support for non-printing text (“U” and “H” and “N”) Support for text highlight (both yellow and red) Support for image/photo insertion Support for right-aligned text Support for text rotation to add some fun to your design Enhanced drawing status window: Provide your users with a more detailed status window for your drawings. Drawings can be resumed, altered, saved, and closed from this status window. Improvements to surfaces: Surface boundaries can be edited and annotated with lines. When an edit is accepted or rejected,

the affected surface(s) are automatically updated.

Improvements to object properties:

Improvements to object properties, such as the status of revisions and insertions. Improvements to

timelines and camera tracking: Get better feedback when using the timelines and camera tracking tools.

Improved workflow for cutting parts from a drawing. (video: 2:38 min.) A

new command has been added to

eliminate the need for users to draw a line between the part and a section.

Using the Sect Line command, you

can select an area and an object, and

AutoCAD will automatically draw a line between the selected area and the object. When a line is selected, a dialog box appears to confirm the action. This dialog box includes a list of commands and the object type selected in the dialog box, and a confirmation indicator. When the Sect Line command is used, AutoCAD uses a tolerance that is based on the closest face of the object and the face closest to the centerline of the line. This enables AutoCAD to calculate a face that is closest to the line when the user selects the line. This ensures that the

faces selected are always inside the line, even if the line has already been inserted into the drawing. When multiple sections of the same
