Price: The trial version is free, the full version costs \$49.Q: Bitbake recipe for multiple seeds? I would like to create multiple Bitbake recipes that have the same base build, but have different seeds. What's the best way to do that? The reason for this is that I want to have a recipe that pulls in a lot of dependencies, and then have another one that pulls in a subset of those. A: If you look at the Bitbake documentation there are a few variables that allow you to specify a node using a variable. e.g. TOPDIR?= "some-dir" IMAGE?= "some-image" In this case it will look in some-dir for the topdir variable, and in some-dir/some-image for the image. You can use %TOPDIR% to specify that it needs to look in some-dir. Using this method you can set the base image and topdir, as well as any others you might need to set. The industrial-grade CNC m/c TENGINE has revolutionized the capabilities of the CNC milling and turning industry and broadens its applications. The TENGINE (Tabletop Electronic Numerical Engine) is a microcontroller-based, customizable, and easy-to-use computer numerical control (CNC) milling and turning machine which leverages the full features of powerful microcontrollers in a compact, single machine, with standard cabling. It is essentially an RISC microcontroller system for milling and turning operations that features an optimized design to fit into various applications. The development platform for the TENGINE is based on an embedded Linux distribution (Coreboot and Linux kernel) and runs on 32 or 64-bit ARM processors of various vendor's CPUs. Specifications: Milling speed: 1,200 to 3,600 mm/min Milling depth: 1.8 to 11.2 mm Tooling: 0.2 - 16 mm The TENGINE is ideally suited for small- and medium-scale machines such as construction, woodworking, furniture, and hobby applications. The system offers a wide variety of different software interfaces for programming the milling and turning behavior. Depending on the application, the user may use a host PC or a dedicated controller with
