What's New in the?

MDB2XML requires the Microsoft.NET Framework Version 1.0 to work and MS Access Runtime Version 4.0. A Windows 2000, XP, 2003, Vista, or Windows 7 PC is required to run Microsoft Access. The Tool Features: You can input a database as source or target database. You can select to show records only (if the database is the source) or show only records with a specific value in a field (if the database is the target). It allows you to specify the name of the output file and the data type of the values (see table of types). Specify the names of the fields to be used in the XML document. It allows you to specify the name of the field's XML element used for each record. It allows you to specify the name of the element used for the root of the XML document. It allows you to save the project as XML document or as a VB, C#, or C++ project. The utility can be run without administrator privileges (but does require administrator privileges to install). You can exit the application (stop) and it will not be destroyed after you exit (shutdown). The Tool Requirements: Microsoft Access.NET Framework: Version 1.0. Microsoft Access Runtime: Version 4.0 Microsoft.NET Framework: Version 1.0 Microsoft Visual C++.NET: Version 6 Microsoft Visual C#.NET: Version 2.0 Microsoft Visual Basic.NET: Version 2.0 Microsoft Visual Basic: Version 6 The Tool Installation: MDB2XML requires installation, you can install it from the "Add/Remove Programs" window of your Windows Control Panel or click here to install the tool. Note: You may need to disable or remove the Microsoft Access Tools in your Tools and Features control panel to install the "Microsoft Access Tools". The Tool Settings: Input: The name of the input database and the name of the output file. Output: The name of the output file and the data type of the values. Fields: You can specify the names of the fields in the XML document. Element: You can specify the name of the XML element used for each record. Root: You can specify the name of the XML element used for the root of the XML document. Nodes: You can specify the name of the XML element used to store each node of the XML document. Save Project: You can save the project as an XML document or as a VB, C#, or C++ project. Exit: You can exit the tool (stop) and it will not be destroyed after you exit (shutdown). Sc
