Technical Field This invention relates generally to devices for cutting sheet materials and is more particularly directed to a rotary ice skater which can be utilized for open air and/or enclosed environments. 2. Background Art One of the many enjoyable winter activities in the United States is ice skating. The sport has continued to grow and receive new and diverse activities including slide-tubing, skate-boarding, rollerblading, etc. The general goal for most ice skaters is to achieve a smooth gliding motion on the ice without losing their momentum. To achieve this goal, the skater typically times their stride such that their center of mass is just before the point of contact between their skating shoe and the ice. To make the most of the skater's momentum, however, the skating shoe must be in contact with the ice for as long as possible. This minimizes the possibility of slipping. Often, in addition to maintaining their momentum, skaters desire a glide path that is within a few inches of the edge of the ice. This allows a skater to move around obstacles and stay
