AutoCAD Crack+

AutoCAD contains a number of user interface elements, and these can be accessed in user interface

extensions and
AutoLISP programs.
The CAD application
runs in a user interface
(UI) that can be
customized, and the UI
elements are available
as user interface
objects (UI objects)
that can be accessed

from outside AutoCAD. The standard UI elements available in AutoCAD are known as standard UI objects (SUI). Examples of these are the "File" menu, the "View" toolbar, and the "Input" ribbon. Using custom

UI elements (CUI), the user can add their own UI elements, such as custom menus, custom toolbars, custom ribbons, custom commands, etc. In addition to using the standard UI elements, designers have the

option of creating their own custom UI elements. This is a very powerful technique for creating high-performance menus, toolbars, and command bars. A new feature was introduced in AutoCAD 2011 that

allows for AutoCAD to work as a designer's web server by enabling "designer mode" (formerly known as "WebStudio mode") when an individual opens a drawing for editing on the web using a web browser or

mobile device.

Interactive User

Interfaces AutoCAD

has a number of

different design tools.

The standard user

interface (UI) is known

as the "Standard User

Interface" (SUI). The

Standard User

Interface contains both standard UI elements, as well as user interface extensions (UI extensions). The Standard UI also has predefined toolbars that can be accessed directly from the keyboard or via the

mouse, depending on the method used for activating the command. For example, the "View" tool palette contains a number of pre-built toolbars with commands that a designer can choose

from. These command options include "View" (which displays the drawing), "View 3D", "View Shadow", "View Hidden" and "View Protected". By default, when a user accesses a UI, the currently activated tool bar

appears in a floating window. The Standard UI is enhanced using toolbars and UI extensions. Toolbars contain commands that a user accesses by activating the toolbar from the "toolbar menu" on the right-

hand side of the screen. A user will then be able to select the commands from the top of the command bar to be "mapped" to keystrokes, mouse clicks, etc. a1d647c40b
