"CamZilla is an easy to use software to take screen capture. As it's a bit more complex program than what you may think. It does come with a nice interface,

---

with intuitive and easy to use features. This is, in fact, one of the best screen capture software out there." CamZilla is another program that you could use to take snapshots of your desktop and create

---

video or image files.  
It's not as powerful as  
other program we've  
reviewed. But it's still  
not a bad application  
for what you want to  
accomplish. Take  
snapshots easily The  
application doesn't  
take long to install

---

and it doesn't come with a complicated setup that you would need to complete before you can actually use it. It's packed with all sort of nice tools and features, neatly arranged under an

---

intuitive graphical interface. Taking snapshots is easy with CamZilla. All you need to do is to click the snapshot button and press the left mouse button, and the program will take a snapshot, like the

image in the above screenshot. Similar to the timer of a camera, the program will beep each second to let you know when the capture will occur. More features and tools You can also create

---

screencasts with CamZilla. You can simply click the record button to record what you want. If you want to stop the recording, you can just press the stop button. In addition, it is possible

---

to record screencasts using CamZilla and save the files in various formats, like AVI, MOV, MP4, or WMV. All in all, CamZilla is a nice tool that you could use to take snapshots of your desktop and

---

create video or image files. CamZilla
