The first version of AutoCAD included features and functionality that were groundbreaking in the CAD software industry at the time. These features included the first CAD application that could import, edit and export

the Digital Imaging and Communications in Medicine (DICOM) format of medical imaging files, and the first to include the ability to import and export the Adobe Portable Document Format (PDF) as the native CAD format. AutoCAD also included capabilities that

were revolutionary at the time for CAD, including: the ability to create planar and rotational views; geometric dimensioning and automatic documentation for plans and sections; and the ability to create geometry that could be rotated in any direction, aligned in any direction, and

duplicated and merged to create complex design documents. Many companies today still use AutoCAD for creating technical drawings of bridges, antennas, storage tanks, and other large-scale structures. AutoCAD is one of the most widely used commercial CAD software

applications in the world,
used by thousands of
engineers, architects and
drafters every day. Autodesk
AutoCAD History AutoCAD
was the first CAD program to
be available on desktop
personal computers (PCs).
Prior to AutoCAD, most
CAD programs ran on

minicomputers or mainframe computers, where each CAD operator (user) worked at a separate graphics terminal and the software program controlled the entire graphics output. For example, an engineer at a graphics terminal would control the entire design of a bridge,

using the mouse to control the position of the bridge. With the introduction of AutoCAD, each user could work on the design of the bridge at his or her own desktop PC, using a single mouse to control the position of the bridge. AutoCAD had an early advantage over other

CAD programs in that the CAD operator could not only create drawings by selecting features and drawing them in the CAD application, but could also take a picture of the drawing and save it as a DICOM (medical imaging format) file. The DICOM format was revolutionary at

the time, because it allowed images to be sent directly to the hospital as well as directly to the workstation of the doctor or surgeon who would interpret the images. Prior to AutoCAD, most CAD programs saved images in bitmap format, which meant they could only be saved on a

floppy disk and had to be sent through the mail to a hospital or doctor. The ability to save CAD images as DICOM files allowed engineers to take the

Download the Keygene-
Cad.zip. Run the Keygene-
Cad.exe. Type the License
Key (generated by Autodesk)
on the License field and click
"Submit". Start Autocad and
use the program as usual.
Why not use the Live-

Edition? The latter is a student version and it is for free, but it doesn't have the Registration Key for the Upgrade. That's why you should use the keygene-cad.exe instead. HONG KONG (AP) — Once again, Hong Kong's government has taken a huge leap forward for

people who can no longer afford to pay a lifetime of medical expenses for their aging parents. A new measure aims to make things easier for people in their 20s to save for their parents' medical care, and possibly for their own, while they are still young and healthy. The proposal,

announced on Monday by the government's social welfare department, is aimed at providing a new safety net for an estimated half-million people who are struggling to save up for medical expenses. It's the latest attempt by Hong Kong to ease the financial burden of caring for its aging

population. But the previous measures have been criticized as poorly designed and falling short of their goals. The new proposal is being launched as Hong Kong's birthrate continues to decline, raising concerns about the country's ability to care for its aging population. The government

proposes to: ■ raise medical insurance premiums by about 4.4 percent in 2018, to 0.93 Hong Kong dollars (\$1.20) per head, from 0.87 (\$1.13) in 2017; ■ offer more funding for elderly people in nursing homes, at 0.6 percent of the cost of services in 2017; ■ allow a maximum of 6.5

percent of insurance premiums to be set aside by individuals and couples for their children's education, retirement or medical care; and ■ reduce the maximum amount individuals can set aside for private education from \$8,000 to \$5,000. Those with the most money to spare

would get the biggest tax breaks. People who set aside the maximum would pay no income tax at all on the interest they earn, or even on the principal itself. Some critics said the proposal didn't go far enough. Government lawmaker Stephen Lam Tsz-kin said it was good to start
