Sep 11, 2019 - They come with a neat little app called Holux ezTour for Logger. Over time, the application became unreliable, mostly with a knocking effect. We started noticing that it didn't work on some devices as it didn't seem to work on low battery devices. In addition, some of them no longer had access to the application. I tried uninstalling the app to restart it and was frustrated when the device didn't turn on again. I had no problems launching Logger from the menu shortcut, so I decided to try the program that starts when the application is turned off.
