The website that we recommend for this task is DriveImage XML. It is an app that you can use to restore your primary drive on PC. You can simply select the drive as well as the file format of the resulting image and then proceed to download the image. Not only does the program create an image of the drive, but it also allows you to save the image to an archive, which can easily be extracted when you're ready to reload the data on the drive. When the data is successfully reloaded, DriveImage XML not only creates the system drive but also makes sure the original contents are restored to the secondary drive. What's more, you can have the program save the image both on an external hard drive and on a ZIP file, so that you can also easily share the image with others. This utility is also compatible with Windows 7, Vista, ME, 2000, XP, Media PC, Windows Mobile, and Pocket PC. We recommend this software for all non-OS related drive related issues. Just because the app is free does not mean that it is a bad product. It is a very professional product with loads of useful features. Most of the USB flash drives come preinstalled with some Windows based application that allows you to view and modify the files that are stored on the flash drive. Some of the applications allow you to backup your data or image files to a new or existing data storage on your PC. The Kingmax UFD Recovery Tool is one of the many applications that are available in the market that allows you to recover data from a corrupted or lost USB flash drive. As the name of the program suggests, the user needs to download and extract the tool to a location of his/her choice. After the extracting process is complete, the user needs to launch the tool by double clicking on it. From then on, the user needs to check the USB flash drive and select the data that he/she wishes to recover. Once the process is finished, the program will display the recovered data. After that, the program will hide itself automatically. However, the program will remain in the system as long as the user has not selected the option to remove the tool. Nonetheless, the user can select the option to remove the tool at any time in order to permanently remove the tool and thus, making the program disappear. How to find out if the program is supported on your system: After you have done a thorough research, you need to make sure that the program you are going to use is officially listed as an officially supported tool by the manufacturer. If you are unable to find any official listing, make sure that the program is distributed on some third party page that offers a kind of guarantee regarding the program. Now, if you still do not know which program to pick and which is really supported by the manufacturer, you can always consult some of your friends or relatives who own or use the same brand of the flash drive. They will definitely let you know if the program you are about to use is the official app. Otherwise, if you are still in the dark, you can always download the trial version to your system in order to see if the program will give you a certain result. Then, if you

still find the results convincing, it is highly recommended that you buy the app. What can you expect when you use this application? The Kingmax UFD Recovery Tool allows you to view and copy all the data stored on the drive. The tool will only work when the drive is in FAT32 file system. For the drives that are in HFS file system, you may experience problems, and you may have to purchase another tool. At
