The present invention relates generally to offshore drilling and production platforms and subsea equipments, and more specifically to an apparatus and method for dynamic support of tubulars from a riser in a deepwater well. Well completion and intervention operations normally begin with the installation of a riser or work string through a riser system to the well head located at the sea floor. Some riser systems include a tie back flotation collars to keep the riser buoyant and prevent it from sinking. The riser is connected to the well

head by a riser connector. Typically, the riser connector is a marine riser connector that is anchored to the sea floor by one or more anchoring lines and a riser tension member connected to the well head by one or more upper or lower tensioning members. Risers of this type are subject to operational and environmental conditions that can cause stress on the riser and the equipment tied back to the riser. These conditions include the dynamic or static or cyclic loads caused by wave and current forces, the highly corrosive and abrasive environment and high tension forces associated with the anchoring lines. Such conditions can cause the riser tension

member to fail, the anchor lines to shear or detach from the anchor, riser parts to deform and ruptured casing or pipe. Current solutions to reduce failure caused by such conditions include the use of heavy duty riser structure, marine riser connectors, the use of high strength steel, and the use of connectors with slip joints that support the riser in tension so that the riser does not bear the force of the anchor lines or casing string through the connectors. Solutions to avoid or reduce damage to the anchor lines have included the use of flexible connectors and slip joints, which support the anchor lines. Ocean FibreNet Ocean FibreNet is a

submarine communications cable system under construction in the UK and France. The total length of the completed cable is with an additional in initial construction. The cable has three landing points in the UK: Felixstowe in Suffolk, Cornwall and the Isle of Wight. It will carry a maximum capacity of 40 Gbit/s and has been built by SeaGull International. The project was funded by the National Grid, the Department of Trade and Industry, the Department for Business, Enterprise and Regulatory Reform, and the Lottery Fund. History The project was initiated by the National Grid in the UK with the goal to create an

deepwater fibre optic transmission cable

Q: What is the origin of Yiddish?
What is the origin of Yiddish? A:
Based on a theory I found in an answer on Jewish World Question:
Regarding the etymology of the name 'Yiddish', a popular theory is that the word comes from the Aramaic word for 'pious', whose origin is the Aramaic word for 'David' (David). Thus, Aramaic 'David' could be rendered as 'Yiddish'. It has also been suggested that the name 'Yiddish' evolved from the words 'Yehudi',

which means 'Jew', and 'Ashkenaz', which means 'Frank'. A comparable etymological change in Hebrew was the origin of the name 'Eretz-Israel', which means 'Land of Israel', or the name 'Tzar-Yehud', which means 'King-Jew'. The wikipedia article suggests that Yiddish is a Germanic language, so another source that mentions this: Yiddish is a Germanic language that developed in Central Europe between the 5th and 12th centuries. It is native to Ashkenaz (English: Old East Franconia or East Saxon Germany) and Slavonic languages. Yiddish forms a Germanic substratum in modern Hebrew. Yiddish is derived from Germanic

languages through a period of westward migration beginning in the 5th century and extending into the 13th century, when Slavonic languages became increasingly prominent and Yiddish ceased to be spoken. Yiddish was greatly influenced by several religious groups in Eastern Europe, particularly the Jews and Orthodox Christian groups. Yiddish was also influenced by neighboring Romance languages. A: Yiddish is certainly Germanic, as such, I cannot put my finger on the exact etymology. The Norman Yiddish is likely to be the vernacular of the French conquest of the duchy of Normandy, then called

"Deutschland", to the point that it was popularised by writing à la deutsch. This influence was added to the influence of viking invasions of north-eastern France, all around Aquitaine and Brittany. Having said this, it is the word of German
