You can also switch between a number of color variations for the entire layer, and then change it specifically on each shape within the layer. When you select a shape within the layer, you can easily resize it and reposition it using the tools available. You can create a copy of a layer by right-clicking on it, and this layer will appear as a tab inside the parent object. When you select a copy from the object library, you can edit the shape at the same time.
